

Bringing beekeepers and pesticide applicators together by tracking and safeguarding hive locations across California using innovative mapping tools.

## About BeeCheck

California regulations require any person intending to apply any pesticide toxic to bees to a blossoming plant to check for apiaries within one mile of an application site. Advisors, growers and applicators can now check for apiaries on BeeWhere. Beekeepers are required by law to register their hives. During registration, they choose if they would like to be notified, and how they want to be notified (phone, email, or anonymous email).

BeeWhere DOES NOT notify beekeepers. It only provides the contact information to growers/applicators, who are responsible for making the notification.

### Growers/Pesticide Applicators

Pesticide applicators (either a Grower applying pesticides on their own crops or a contracted Pest Control Business operating on behalf of a Grower) can use the BeeWhere web site to obtain contact information for beekeepers with colonies within a mile of an upcoming pesticide application.

The pesticide applicator will not receive any information about the specific locations of the bee colonies.
